About the System

Invoice, Purchase & Billing System is a complete business billing solution built on a cloud-based platform. It brings sales invoicing, purchase billing, GST compliance, payment tracking, MIS reporting, PDF generation, email and WhatsApp automation into one secure system, with no monthly software subscription.

It is designed for traders, distributors, manufacturers and service companies that need a professional, fast and affordable billing system that the team can start using on day one.

Key Benefits

- One system for Sales Invoices and Purchase Bills
- Automatic GST: CGST + SGST within state, IGST for other states
- Professional PDF invoices with company logo, GSTIN, bank details and terms
- Email and WhatsApp sending with PDF, plus a full message log
- Real-time MIS dashboard with sales, collections, payables and GST position
- Role-based login for Admin and User
- Automatic daily payment reminders for overdue invoices
- No monthly software fee. Runs on a standard cloud account

Module Overview

Module	Purpose
Dashboard	Live MIS, KPIs, monthly trend and GST summary
Sales Invoices	Create, track and collect customer invoices
Purchase Bills	Record vendor bills and track payables
Parties & Items	Customer, vendor and product master data
Automation	WhatsApp, email and overdue payment reminders
Settings & Security	Company profile, users, roles and API configuration
Message Log	Audit trail of every outgoing email and WhatsApp message

Feature Walkthrough

Each module is shown below as it appears in the application.

1. Secure Login and User Roles

Every user signs in with a User ID and password. Passwords are stored as SHA-256 hashes, never in plain text, and sessions expire automatically after 6 hours.

- Admin and User roles with separate permissions
- Admin can create users, change company settings and WhatsApp API configuration
- Users can change their own password at any time
- API keys are kept in protected server settings and are never shown to users

2. MIS Dashboard

A real-time dashboard that gives management a complete view of sales, collections, purchases and the GST position on one screen.

- KPI cards: sales billed, collected, receivable, purchases, payable and net GST
- Monthly sales vs purchase trend chart
- Top customers ranked by billing value
- Overdue invoice count for quick follow-up

3. Sales Invoice Register

All sales invoices in one register with live status. Search by invoice number or party, open any invoice in one click, and record receipts with mode and reference.

- Search by invoice number or party name
- Automatic status: Unpaid, Sent, Partial, Paid and Overdue
- Record receipts with cash, UPI, NEFT, RTGS, cheque or card details
- Each invoice keeps its full payment history

4. New Invoice with Live GST

Create an invoice in a few clicks. Items are picked from the master, so rate and GST rate fill in automatically, and totals update as you type.

- Select customer, invoice date and due date
- Pick items from the master with automatic rate, HSN and GST
- Automatic tax type: CGST + SGST for same state, IGST for other states
- Save, then email or send on WhatsApp in one step

5. Professional Invoice and PDF

Every invoice is generated as a clean, professional PDF with your company identity, tax details, bank information, terms and payment history.

- Company logo, name, tagline, GSTIN, PAN and contact details
- Itemised table with HSN, quantity, rate, amount and GST
- CGST/SGST or IGST breakdown, paid amount and balance due
- Bank details, terms and authorised signatory block
- Copyright footer on every document

6. Purchase Bill Register

The same engine handles vendor bills. Track purchases, input GST and payables, and record payments made to vendors.

- Separate purchase numbering with its own prefix
- Vendor-wise payable tracking with partial payments
- Input GST flows into the dashboard for the net GST position
- Same PDF, email and message features as sales

7. Parties and Item Masters

Maintain customer and vendor records once and reuse them everywhere. Correct GSTIN and state make tax calculation automatic.

- Separate customer and vendor records with GSTIN, state, email and phone
- Item master with name, HSN or SAC code, rate, GST rate and unit
- Items are reused on invoices and bills, which keeps data consistent
- Clean lists that are easy to search and update

8. Settings and WhatsApp API

Configure the company profile, numbering, automation switches and the WhatsApp API connection from one page. The full API key is never shown after saving.

- Company branding, numbering prefixes and bank details
- Auto-email and auto-WhatsApp switches after saving a document
- WhatsApp connection test with a single click
- Masked key display, so the secret stays protected

9. Message Log and Automation

Every email and WhatsApp message is recorded with its status, so nothing is lost and failures are easy to find and fix.

- Complete log of email and WhatsApp messages with time and status
- Bulk WhatsApp sending from a spreadsheet with placeholders such as {Name}
- Automatic daily reminders for overdue invoices at 9 AM
- Failed messages show the reason so they can be re-sent
